

## TRANQUIL & ENTICE CARE INSTRUCTIONS

For daily cleaning of the basin, we recommend the use of a soft cloth with warm water and a neutral, non-abrasive soap. For a perfect finish, the best option is to dry the basin with a soft, dry cloth after each use. This will help to maintain the natural shine of the piece.

Never use abrasive products that might cause irreversible damage to the piece or rough materials that might scratch the polished surface. As these are metal pieces, the application of acids and strong oxidants can alter the finish. Avoid these kind of products as well as the ones sold for "cleaning silver".

It is very important not to leave standing liquid, as this could leave marks in the basin. If any of these cases occur, clean the basin following the instructions above as soon as possible.

Non-abrasive products available on the market for polishing metals can be used occasionally.

The best maintenance is the daily care: a soft cloth with warm water, neutral soap and a thorough drying. This will prevent dirt from accumulating and the appearance of stains that would require the use of stronger products.
